

Young people, well-being, resilience and enterprise: critical perspectives for the Anthropocene

Disparate times call for disparate methods. Let's just say that this is the end of pre-history, this moment when planetary constraints start really coming to bear on the ever-expanding universe of the commodification of everything. This is the worldview-changing realization that some now call the Anthropocene. (McKenzie Wark 2016)

Call for Papers

What happens when human exceptionalism and methodological individualism, those old saws of Western philosophy and political economics, become unthinkable in the best sciences, whether natural or social? Seriously unthinkable: not available to think with. (Donna Haraway 2016)

Well-being, resilience and **enterprise** are key-words (Raymond Williams) in many policy, academic and community discourses about contemporary populations of children and young people around the globe. These 'states-of-being' are frequently imagined as being able to 'inoculate' individual children and young people against many of the education, training, work and life 'disruptions' that characterise the start of the 21st century.

Most often these key-words take the form of individualising and responsiblising, psycho-biological based, encouragements for persons to care for their own physical, mental and social health and well-being, to develop their resilience, and to become enterprising in a world that is taken-for-granted as being troubling, challenging and 'disruptive'.

This call emerges from a sense that we need to develop new ways of 'troubling' these keywords at a time when planetary systems - environmental, capitalist - are in crisis.

Children, young people, agency, structure, space, place, cities, belonging, community, family, peers, cultures of democracy, Precarity, activism, schooling, education, training, work, play, mobilities, refugees, populism, sustainable development goals (SDGs), government, neo-Liberalism, capitalism, sexualities, bodies, race, class, gender, abilities,...

The Anthropocene is, firstly, a discourse of the earth systems science. However, if 'humans' - in all their historical, cultural, social, economic and political diversity – are differently implicated in the emergence and consequences of the Anthropocene, then the social sciences and humanities must critically engage with, and contribute to, debates about these planetary wide changes and their consequences.

We are looking to start conversations, collaborations and networking to discuss theoretical and/or methodological contributions to discussions about children and young people's well-being, resilience and enterprise that:

- 1) Critically engage with and/or review what the literature on the Anthropocene offers childhood and youth studies for thinking about such things as 'agency', 'structure', 'identity', 'belonging',...
- 2) Trouble/unsettle key dimensions of these keywords, and the forms of regulation, intervention, and problematising of children and young people that they enable.

Format: 2 days (9.00-18.00, with big breaks)
3 sessions per day (120 mins)
4 papers per session
24 papers over 2 days
No concurrent sessions
Networking/workshop morning Saturday 7th
Cost 100 Euros (to support catering)

Title/Abstract 200-300 words
Submit to
young.people.anthropocene@gmail.com

Submission closes: February 12th 2019

Acceptance notified: March 2nd 2019
